On 6 February, 2009, a bill was introduced to prohibit the use of bisphenol A (BPA) in specified products and to amend the Canadian Environmental Protect Act, 1999. If approved, the Marshall shall, within 6 months after the day on which this Act comes into force, make regulations prohibiting the use of bisphenol A in certain products.

The scope expands the bisphenol A restriction beyond the baby bottle.

For the new scope, it covers the specified product with respect to:

- Food and drink packaging, including food cans, beverage cans, bottle tops and plastic containers for beverages, including bottled water;
- Products designed to feed infants, including feeding bottles, sippy cups and other similar products;
- Reusable water bottles sold for hiking and other recreational outdoor uses and reusable food containers;
- Dental polymers, including dental sealants; and
- Water supply pipes.

Throughout our global network of laboratories, we are able to provide a range of services, including analytical testing and consultancy for bisphenol-A content and migratable bisphenol-A as well as other restricted chemicals in a comprehensive range of childcare and consumer products for worldwide markets. Please do not hesitate to contact us for further information. Please also refer to our Safeguards dated November 2008 on the proposed ban in plastic baby bottles.
