EU HARMONISED STANDARD FOR HOUSEHOLD REFRIGERATING APPLIANCES

Regulation (EC) No 643/2009 establishes ecodesign requirements for the placing on the market of electric household refrigerating appliances and its scope covers those appliances with a volume of up to 1500L, those sold for non-household use, as well as those that are battery-operated.

The purpose of the ecodesign requirements detailed in Directive 2005/32/EC is to ensure the free movement of such products on the EU market while addressing sustainable development and safeguarding the protection of the environment.

Regulation No 1060/2010 supplements Directive 2010/30/EU which creates a framework for labeling and standard product information relating to energy consumption with the goal of enabling end users to select more efficient household products.

As the world’s leader in third party testing SGS has the global knowledge and local expertise to help you achieve compliance with Electrical & Electronics regulations covering product safety, EMC, hazardous substances (RoHS, REACH, SVHC etc), energy efficiency, Ecodesign, ErP, Performance and Reliability as well as with many other consumer product related requirements. Whether you are in need of testing or services in the fields of inspection, certification, compliance assurance, outsourcing, training or auditing, SGS is ideally positioned to satisfy your needs. www.sgs.com/ee
